Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The relevant passages are those cited in the search report.

2. The subject matter of the present application relates to a synthesis of a salt from aspartame and acesulfame-H (claims 1-11), a salt obtained from aspartame and acesulfame-H (claims 12 and 13) and the use thereof (claim 14).

3. Synthesis (claims 1-11)

- 3.1 Novelty

Document D1 discloses the reaction of neotame with acesulfame-H in different solvents not disclosed in claim 1 (page 6, lines 5-19).

Documents D2 and D4, D6 and D8 disclose the reaction of acesulfame-K in an acid medium with aspartame/aspartame derivatives.

In document 3 acesulfame-H is converted into MeOH.

Document D7 describes the synthesis of acesulfame-H into the claimed LM, the conversion with the base into acesulfame-K then being carried out in an aqueous phase.

Consequently, the method according to claims 1-11 is not disclosed. Claims 1-11 therefore satisfy the requirements of PCT Article 33(2).

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

3.2 Inventive step

Document D6 expressly refers to the synthesis according to document D7 to disclose acesulfame-H which is then converted in an aqueous phase with basic AS. A combination with documents D8 or D7 with document D1 would likewise not lead to the claimed synthesis, whose aim is the production of a stable sweetener salt. Claims 1-11 meet the requirements of PCT Article 33(3).

4. Salt (claims 12 and 13)

4.1 Novelty

Document D2 contains precise data on the stability of the salt which demonstrate that the salt produced according to document D2 has a DKP content of 0.01 % or more even before heating. This content will remain after heating. The compounds disclosed in document D2 therefore present a breakdown rate far exceeding the breakdown of less than 0.005% DKP after heating, as claimed by the invention. Consequently, the subject matter of claims 12 and 13 can be considered novel and hence claims 12 and 13 satisfy the requirements of PCT Article 33(2).

4.2	Inventive step
-----	----------------

	<p>The claimed invention makes available an APMHAcE which is more stable than that of the prior art document D2, owing to the lower breakdown of the product during heating. Consequently, claims 12 and 13 meet the requirements of PCT Article 33(3).</p>

5.	Use (claim 14)
----	----------------

	<p>Point 4 applies analogously to the use of the salt in food, beverages, pharmaceuticals and cosmetics. The requirements of PCT Article 33(2) and (3) are satisfied.</p>

6.	The subject matter of claims 1-14 meets the requirements of PCT Article 33(4).
